		FEDERAL STOCK NUMBER AND PART NUMBER INDEX	64

SECTION 1

INTRODUCTION

1. General

a. This manual lists the special tools and quantities of repair parts authorized and required to be stocked by organizational maintenance echelons as their prescribed load. Repair parts not authorized for stockage but which may be required to perform maintenance of the equipment are listed with no quantities shown. Information and data shown herein serve as requisitioning reference material, and as a guide to determine quantities of repair parts required for stockage.

b. Price information for stock-type repair parts may be obtained from applicable Department of the Army type-2-series supply manuals.

c. Repair parts lists are arranged as follows:

- (1) Individual parts and major assemblies are listed alphabetically within the numbered functional groups.
- (2) Assembly components and subassemblies are indented and listed alphabetically under major assemblies.
- (3) Bulk material and parts peculiar with more than one application are listed in either functional group 9501 or 9901.

d. Allowances are based on 6,000 hours operation per year.

2. Explanation of Repair Parts, Tool Lists, and Prescribed Load Listing (Table 1)

a. *Source Codes.* This column is subdivided into four columns.

- (1) *Technical service.* This column lists either the basic number of the technical service or code symbol of the supply center assigned supply responsibility for the part. Blank spaces denote Corps of Engineers supply re-

sponsibility. General Engineer supply parts are identified by the letters "GE" in parentheses, following the nomenclature in the description column. Other technical service basic numbers or supply center code symbols are—

- 3—Chemical Corps
- 9—Ordnance Corps
- 11—Signal Corps
- 55—Transportation Corps

(2) *Source.* The selection status and source of supply for each part are indicated by one of the following code symbols:

- (a) P—applied to high-mortality repair parts which are stocked in or supplied from the technical service depot system and authorized for use at indicated maintenance echelons.
- (b) P1—applied to repair parts which are low-mortality parts, stocked in or supplied from technical service depots, and authorized for installation at indicated maintenance echelons.
- (c) M—applied to repair parts which are not procured or stocked but are to be manufactured at indicated maintenance echelons.
- (d) A—applied to assemblies which are not procured or stocked as such but made up of two or more units, each of which carries individual stock numbers and descriptions and are procured and stocked and can be assembled by units at indicated maintenance echelons.
- (e) X—applied to parts and assemblies which are not procured or stocked, the mortality of which is normally

below that of the applicable end item, and the failure of which should result in retirement of the end item from service.

- (f) X1—applied to repair parts which are not procured or stocked, the requirement for which will be supplied by use of next higher assembly or component.
- (g) X2—applied to repair parts which are not stocked. The indicated maintenance echelon requiring such repair parts will attempt to obtain them through cannibalization; if not obtainable through cannibalization, such repair parts will be requisitioned with supporting justification through normal supply channels.
- (h) C—applied to repair parts authorized for local procurement. If not obtainable from local procurement, such repair parts will be requisitioned through normal supply channels with a supporting statement of nonavailability from local procurement.
- (i) G—applied to major assemblies that are procured with PEMA (Procurement Equipment Missile Army) funds for initial issue only to be used as exchange assemblies at field maintenance level. These assemblies will not be stocked above field maintenance level or returned to depot supply level.
- (j) Z—applied to obsolete repair parts no longer stocked or procured.

(3) *Maintenance.*

- (a) The lowest maintenance echelon authorized to manufacture, assemble, and/or install the part is indicated by the code symbol:

O—Organizational Maintenance (1st and 2d echelons). Capabilities of higher maintenance echelons are considered equal or better.

- (b) This column is blank when components of kits or sets are listed that are not applicable to the item of

equipment, or when an item is source coded X1.

- (4) *Recoverability.* Repair parts and/or tool and equipment items that are recoverable are indicated by one of the following code symbols:

- (a) R—applied to repair parts and assemblies which are economically repairable at field maintenance activities (3d and 4th echelons) and normally are furnished by supply on an exchange basis. Items that can be economically repaired are considered nonexpendable.
- (b) T—applied to high-dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities.
- (c) U—applied to repair parts specifically selected for salvage by reclamation units because of precious metal content, critical materials, high-dollar value reusable casings, castings, and the like.

Note. When no code is shown in the recoverability column the part is considered expendable.

b. Federal Stock Numbers. The Federal stock number will be shown in this column and will be used for requisitioning purposes.

c. Description.

- (1) The item name and a brief description of the part are shown.
- (2) A five-digit Federal supply code for manufacturers and/or other technical services is shown in parentheses, followed by the manufacturer's part number. This number will be used for requisitioning purposes when no Federal stock number is indicated in the Federal stock number column.

Example: (08645) 86453.

- (3) Repair part quantities included in kits, sets, and assemblies, that differ from the actual quantity used in this specific end item, are listed in parentheses.
- (4) When repair parts are source coded

"C", the manufacturer's part number will be used for local procurement.

d. *Unit of Issue.* If no abbreviation is shown in this column, the unit of issue is each.

e. *Quantity Incorporated in Unit.* The actual number of parts used in the application indicated is shown in this column. A zero (0) is shown when components of kits or sets are listed that are not applicable to this specific end item.

f. *15-Day Organizational Maintenance Allowance.* Shown for each repair part is either a quantity or an asterisk allocation which indicates the following:

- (1) A quantity is shown for each repair part authorized to be stocked as the prescribed load. This quantity is based on past experience with similar items and the latest mortality data for 6,000

hours operation per year. It is the average quantity required to provide organizational maintenance for 1-5 and/or 6-10 items of equipment for a 15-day period under average combat conditions.

Note. Combat essential items which must be stocked or on order at organizational maintenance at all times, regardless of demand, will be identified in the allowance column by a quantity in parentheses.

Table I is the prescribed load listing of items quantitatively allocated in this technical manual and lists the combat essential items required to support the end item of equipment. Repair parts required to perform organization maintenance, which are not authorized for stockage, are identified by an asterisk in Section II, and are to be requisitioned for immediate use only.

Table I. Prescribed Load Listing

Federal stock No.	Description	Functional group	Minimum stockage authorization	Unit of issue	15-day organizational maintenance allowances	
					1-5	6-10
2815-701-6857	GASKET: bracket mtg (28265) 255252A.....	0108				1

5910-127-8448	CAPACITOR, FIXED PAPER DIELECTRIC: 1 μ f, 100v (14655) CA442.	0615			(1)	(1)

Table I. Prescribed Load Listing—Continued

Federal stock No.	Description	Functional group	Minimum stockage authorization	Unit of issue	15-day organizational maintenance allowances	
					1-5	6-10
5910-280-9984	CAPACITOR, FIXED, PAPER DIELECTRIC: load terminals (14655) CA475.	4019	(1)	(1)
5920-012-0114	FUSE, CARTRIDGE: 30 amp (71400) AGC30.	0608	(1)	(1)
5920-539-7845	FUSE, CARTRIDGE: 15 amp 250v (71400) ABC15.	4011	(1)	(1)
5920-729-8584	FUSE, CARTRIDGE: 10 amp 125v (71400) GLH10.	4011	(2)	(5)
6115-691-5488	IGNITER ASSEMBLY (11583) AG8X1.....	2207	1	1
6240-155-7866	LAMP, INCANDESCENT: panel light 24v (GE) (71744) 356.	4009	1	3
6240-155-8714	LAMP, INCANDESCENT: pilot light, 24v (24455) 313.	2207	1	1
6240-779-8115	LAMP, GLOW: synchronizing (84258) 329....	4009	1	3

(2) The quantities listed in table I are for one prescribed load for a 15-day period. A minimum stockage sufficient to repair one item and/or assembly is authorized (e.g., if 3 belts are required, then 3 belts are allocated as the minimum stockage). This quantity will be indicated in the minimum stockage authorization column. The quantities contained in the prescribed load must be on hand or on order at all times. Units and organizations authorized additional prescribed loads will multiply the number of prescribed loads by the appropriate end item spread column of 1-5 or 6-10. When more than 10 equipments are authorized, multiply the quantity authorized in the 6-10 density spread column by the number of equipments and the number of prescribed loads, divide by 10, and round to the nearest whole number. *Example:* If the density spread is 4, the number of equipments is 17, and the number of prescribed loads is 1, the following formula would be used:

$$4 \times 17 \times 1 \div 10 = 6.8$$

The resulting fraction is 0.8; therefore the stockage is 7.

Example: If the density spread is 4, the number of equipments is 17, and the number of prescribed loads is 3, the following formula would be used:

$$4 \times 17 \times 3 \div 10 = 20.4$$

The resulting fraction is 0.4; therefore, the stockage is 20.

Note. An exception is made for those units and organizations required to have on hand, boxed or packaged prescribed load(s) pursuant to a special mission assignment. Such prescribed load(s) will be computed or selected separately from quantities authorized for stockage at permanent station.

(3) Subsequent changes to allowances will be limited as follows:

- (a) No decrease in the stated quantity of combat essential items is authorized.
- (b) No change in the range of items is authorized. If exception to the prescribed load listing or revision to allowances is considered necessary, a recommendation should be forwarded to the U.S. Army Mobility Support Center (par. 6).
- (c) Decreases in the stated quantity of items other than combat essential items are authorized to a minimum quantity of one and increases in the stated quantity are authorized for all items when justified by demand and usage experience. Detailed procedures for performing these adjustments are prescribed in AR 735-35.

g. Illustrations. This column is subdivided into two columns as follows:

(1) *Figure number.* Indicates the num-

ber of the illustration in which the part is shown.

- (2) *Item number.* Indicates the reference number used to point out the part in the illustration.

3. Federal Stock Numbers and Manufacturers' Part Numbers

Listed alpha-numerically in the back of this manual are the requisitioning numbers shown in the Federal stock number and/or description column. The alphabetical 0 is listed as a numerical 0 (zero). This index also lists manufacturers' codes (as applicable) and page numbers.

Example of index sequence:

A	BX5-27	38.50
AA	T295	3838-141-4957
A1/2X3	0124	3885 212
A1-950	1-77	389/100.2
A1A22	2530-048-7342	389/100-18
B	2815-097-5429	3895-128-7642

4. Abbreviations

ac	alternating current

6. Comments and Suggestions

Report all deficiencies in this manual on DA Form 2028. (Recommended Changes to DA Technical Manual Parts Lists or Supply Manual, 7, 8 or 9). Submit recommendations for changes, additions, or deletions to repair parts allocation and allowance factors and other data. Additional data on climatic and terrain conditions of operation, operational age of the equipment, and the hours operated in the period covered by item 7 of DA Form 2028 are desired. Submit to the Commanding Officer, U.S. Army Mobility Support Center, ATTN: SMOMS-MM, P. O. Box 119, Columbus 16, Ohio. Direct communication is authorized.

1. General

NG: State AG (3).

USAR: Same as active Army except allowance is one copy to each unit.

For explanation of abbreviations used, see AR 320-50.

☆ U.S. GOVERNMENT PRINTING OFFICE : O-802-297

a. This manual lists quantities of repair parts required to be stocked in maintenance echelons. Repair parts not authorized for stockage but which may be required to perform maintenance of the equipment are listed with no quantities shown. Information and data shown herein serve as requisitioning reference material, and as a guide to determine quantities of repair parts required for stockage.

b. Price information for stock-type repair parts may be obtained from applicable Department of the Army type 2 active supply manuals.

c. Repair parts lists are arranged as follows:

- (1) Individual parts and major assemblies are listed alphabetically within the numbered functional groups.
- (2) Assembly components and subassemblies are indented and listed alphabetically under major assemblies.
- (3) Bulk material and parts peculiar with more than one application are listed in either functional group 9501 or 9502.

d. Allowances are based on 5,000 hours of operation per year.

2. Explanation of Repair Parts, Tool Lists, and Prescribed Load Listing (Table 1)

a. Source Codes. This column is subdivided into four columns:

- (1) Technical service. This column lists either the basic number of the technical service or code symbol of the supply center assigned supply responsibility for the part. Blank spaces denote Corps of Engineers supply re-

sponsibility. General Engineer supply responsibility is indicated by the letters "GE" following the code symbol. Other technical service basic numbers or supply center code symbols are—

- 1—Chemical Corps
- 2—Ordnance Corps
- 11—Signal Corps
- 35—Transportation Corps

(2) Source. The selection status and source of supply for each part are indicated by one of the following code symbols:

- (a) P—applied to high-mortality repair parts which are stocked in or supplied from the technical service depot system and authorized for use at indicated maintenance echelons.
- (b) P1—applied to repair parts which are low-mortality parts, stocked in or supplied from technical service depots, and authorized for installation at indicated maintenance echelons.
- (c) M—applied to repair parts which are not procured or stocked but are to be manufactured at indicated maintenance echelons.
- (d) A—applied to assemblies which are not procured or stocked as such but made up of two or more units, each of which carries individual stock numbers and descriptions and are procured and stocked and can be assembled by units at indicated maintenance echelons.
- (e) X—applied to parts and assemblies which are not procured or stocked, the mortality of which is normally
